

Phishing Email Detection & Awareness Report

PHISHING EMAIL DETECTION & AWARENESS REPORT

Prepared By:
Sravani Yalavarthi

Internship:
Future Interns - Cyber Security Internship

Date:
May 2026

Introduction:

Phishing is a cybercrime technique where attackers impersonate trusted organizations to trick users into revealing sensitive information such as passwords, banking details, and personal information. Phishing attacks are commonly delivered through emails containing fake links, attachments, or urgent requests.

This report analyzes different email samples and classifies them as Safe, Suspicious, or Phishing based on their characteristics and risk level.

Objective:

The objective of this project is to identify phishing indicators in emails, classify emails according to risk level, and create awareness about phishing attacks and prevention methods.

Tools Used:

- Gmail
- Browser Tools
- Google Docs
- GitHub

Email Analysis:

Email 1

Sender: support@amazon.in

Classification: Safe

Risk Level: Low

Email 2

Sender: notifications@linkedin.com

Classification: Safe

Risk Level: Low

Email 3

Sender: security-update@gmail.com

Classification: Suspicious

Risk Level: Medium

Email 4

Sender: accountverify123@yahoo.com

Classification: Suspicious

Risk Level: Medium

Email 5

Sender: support@paytm-security.xyz

Classification: Phishing

Risk Level: High

Detailed Email Analysis:

Email 1

Sender: support@amazon.in

Indicators:

- Official sender domain
- No suspicious links
- Professional language

- No request for sensitive information

Classification: Safe

Reason:

This email appears legitimate because it comes from a trusted sender and does not contain any phishing indicators.

Email 2

Sender: notifications@linkedin.com

Indicators:

- Trusted sender
- Proper grammar
- No suspicious attachments
- Secure links

Classification: Safe

Reason:

The email is from a recognized professional platform and follows standard communication practices.

Email 3

Sender: security-update@gmail.com

Indicators:

- Generic email address
- Urgent language used
- Requests account verification

Classification: Suspicious

Reason:

The email creates urgency and uses a generic sender address, which may indicate phishing attempts.

Email 4

Sender: accountverify123@yahoo.com

Indicators:

- Unknown sender

- Requests login verification
- Unofficial email domain

Classification: Suspicious

Reason:

The sender is not associated with any official organization and requests sensitive account actions.

Email 5

Sender: support@paytm-security.xyz

Indicators:

- Fake domain name
- Requests password details
- Creates panic
- Suspicious links

Classification: Phishing

Reason:

This email contains multiple phishing indicators and attempts to steal user credentials.

Prevention Guidelines:

- Never click unknown links.
- Verify sender email addresses carefully.
- Do not share passwords or OTPs.
- Avoid opening suspicious attachments.
- Enable two-factor authentication.
- Report phishing emails immediately.
- Keep software and browsers updated.

Conclusion:

Phishing attacks are one of the most common cybersecurity threats in today's digital world. By carefully examining email senders, links, attachments, and message content, users can identify and avoid

phishing attempts. Awareness and cybersecurity best practices play an important role in protecting personal and organizational data.
